

# TIMBER REPLACEMENT SOLUTIONS FOR THE EQUINE, AGRICULTURE & CONSTRUCTION INDUSTRY

**D**otmar's Uniboard and StableBoard products were specifically developed for use as timber replacement material. Perfectly suited for replacing old, rotting and flaky timber within the agriculture, equine and construction industries. These products eliminate the current need for any on-going maintenance programs. Uniboard and StableBoard will never require painting, will never be attacked by termites or other insects, will never absorb smelly animal urine and just as importantly does not carry diseases. This makes both products ideal in controlling your biosecurity requirements within a farm and stud environment.

Uniboard and StableBoard are 100% non water absorbent products, they are UV resistant to cope with the harsh Australian conditions and look great!

Dotmar's Uniboard and StableBoard products are well suited in high impact areas where large animals like horses and cattle are more prone to causing impact type damage from kicking and pushing. The long term benefits of using Uniboard and StableBoard material far exceed the lifespan and durability of any wood based product in the market today.

Please contact your Dotmar representative to assist you in selecting the best suited product for your application.

- **100% waterproof products**
- **High impact resistance**
